Can 5g base station communication use 5g

Overview

[2] 5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.Overview5G is the fifth generation of technology and the successor to . First deployed in 2019, its technical standards are developed by the (3GPP) in cooperation with the.

In 2008, NASA and the conducted nanosatellite communication studies that influenced early next-generation network concepts. In 2012.

Small cells are low-power radio nodes that extend network capacity in dense or indoor areas. They operate over short distances, typically a few dozen to a few hundred metres, and are used to maintain coverage for mmWav.
