Power conversion technology defines system efficiency and operational reliability in modern solar installations. The inverter functions as the critical interface between photovoltaic arrays generating direct current and electrical infrastructure requiring sinusoidal alternating current at standard.

DC (Direct Current) is the form of electricity generated by the solar photovoltaic panel and stored in batteries. DC outlets are often found on boats, RVs, and cars. While there are DC appliances and devices out there (like the line of SunDanzer DC refrigerators and freezers found on this site).
