Below, we've put together an overview of nine common container types, together with their International Organization for Standardization (ISO) type codes. An ISO size and type code is a four-character code of letters and numbers, displayed on each container, which identifies the container's length.

Container shipping is the most economical transportation mode for your cargo. Fitted on ships, trains and trucks, the humble container redefined international shipping and allowed global trade to expand to the levels we know today. Which container type is the most suitable for your cargo?

Is it.

American Distribution Boxes are made of high-density polyethylene for years of dependable use. They are non-corrosive, strong, and lightweight for easy handling. Inlet and outlet elevations are positioned to provide equal distribution and meet most local codes. Twist and lock 4" pipe seals and.

A high cube container type offers extra height to ship and store large cargo: external dimensions: same length and width as a standard container (20 ft, 40ft, or 45ft long, 8 feet wide), but with one big difference — it's 9 feet 6 inches tall. internal dimensions: 8 feet 10 inches of vertical.

Shipping containers are standardized large metal boxes used for transporting goods across the globe. Millions of different products need to be moved worldwide, each with different shapes, sizes, and requirements. To select the perfect shipping container or to decide which container is right for.

From the temperature-controlled security of insulated containers to the space-maximizing potential of high cube units, each type offers unique advantages that can be tailored to your specific needs. Here's a quick rundown of the most common shipping container types you'll encounter: Each of these.
