In July 2024, Governor Hochul's Inter Agency Fire Safety Working Group (FSWG) released fifteen fire code recommendations to the New York State Fire Prevention and Building Code Council (Code Council) in response to energy storage fires at three sites in Summer 2023. These recommendations were.

Energy storage systems, typically made of lead-acid or lithium-based batteries, provide backup power at hospitals and healthcare facilities, factories, and retail locations. They also regulate and clean grid power for data centers. Finally, energy storage containers offload energy when renewable.

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid, which can ultimately reduce energy costs for New Yorkers. As New York State transitions to renewable energy technologies like wind and solar, energy storage can provide energy when the wind isn't.

Energy storage is a smart and reliable technology that helps modernize New York's electric grid, helping to make the grid more flexible, efficient, and resilient. With thousands of energy storage sites already in place across the State, this exciting technology is playing an important role in.
