

# Environmental project using 1MW off-grid solar container in Fiji

## Overview

---

As part of the Fiji Department of Energy's drive to increase renewable energy deployment and improve energy security, the Global Green Growth Institute (GGGI) and Arizona State University (ASU) have collaborated on the project 'Accelerating Solar Mini-grid Deployment in Fiji' which.

As part of the Fiji Department of Energy's drive to increase renewable energy deployment and improve energy security, the Global Green Growth Institute (GGGI) and Arizona State University (ASU) have collaborated on the project 'Accelerating Solar Mini-grid Deployment in Fiji' which.

In a first of its kind for the region, this 1MWp grid-connected solar farm with a 1.1MWh battery energy storage system helps provide a smooth supply of renewable energy for 18,000 residents of Taveuni, Fiji's third largest island. This solar farm, designed and installed by Clay Energy as an EPC.

In a pioneering effort for the Pacific region, Sunergise International subsidiary Clay Energy, in collaboration with the Fiji Government and funded by the Korea International Cooperation Agency (KOICA), spearheaded the establishment of a groundbreaking 1MW grid-connected solar photovoltaic farm.

Merging a Solar PV with BESS into an existing Island grid containing 700kW Hydro and Diesel generation. Increasing momentum toward renewable energy solutions, particularly solar power. Discuss implementation to gather insights for future renewable energy initiatives and maximize potential. KOICA.

Fiji is located in Oceania and has plenty of solar energy. It gets more than 2,500 hours of sunlight per year. Still, 60% of the island's electricity comes from diesel generators. This led to high costs, more pollution, and a weak power supply system. The project uses a new approach: "solar first.

Fiji is embarking on a project to bring solar power to its remote islands. It starts by creating tenders for mini-grid construction, and employing tools to customize energy systems for each community ensuring each community's needs are met. The project is building bridges with local communities and.

As part of the Fiji Department of Energy's drive to increase renewable energy

deployment and improve energy security, the Global Green Growth Institute (GGGI) and Arizona State University (ASU) have collaborated on the project 'Accelerating Solar Mini-grid Deployment in Fiji' which has completed.
