India's solar module exports to the US are booming, driven by US restrictions on Chinese imports. Indian modules are cheaper, making them attractive. However, new US tariffs and investigations are creating concerns. India is also expanding its own solar production capacity to meet growing global.

India's solar module exports rose nearly nine times in 2023 and doubled again in 2024. It notes that this shift positions India as a credible alternative supplier in the global solar value chain Updated - December 30, 2025 at 04:55 PM. Solar power tariffs continue to decline as technology advances.

According to a report by PL Capital, India's solar industry is finding a major customer in the United States. The reason can be attributed to the U.S. restricting imports from China-linked supply chains. As a result, the U.S. became the main buyer, taking about 97 per cent of India's solar module.

This report includes summary data for the photovoltaic industry from annual and monthly respondents. Data include manufacturing, imports, and exports of modules in the United States and its territories. Summary data include volumes in peak kilowatts and average prices. Where possible, imports and.

A recent report by PL Capital highlights that shifting trade policies and restrictions

on China-linked supply chains have opened new opportunities for Indian solar manufacturers in the American market. As a result, the US accounted for nearly all of India's solar module exports between 2023 and.

Export return of solar modules

[China To Lower Solar Export Tax Rebates From 13% To 9%](#)
