

# How many watts are suitable for outdoor inverters

## Overview

---

Here's the cheat code: your inverter size should match your solar panel output. If your system pushes 5,000 watts, a 5,000-watt (or 5 kW) inverter is usually the move. But it's not always one-to-one.

Here's the cheat code: your inverter size should match your solar panel output. If your system pushes 5,000 watts, a 5,000-watt (or 5 kW) inverter is usually the move. But it's not always one-to-one.

During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes. Additionally, you'll learn what appliances you can power and how you can select the right inverter size according to your.

A solar inverter should closely match your solar system's output in kW—typically within 80% to 120% of your total panel capacity. Too big = wasted money. Too small = wasted energy

### What Is a Solar Inverter and Why Does Size Matter?

Swap out old appliances for energy-efficient ones to cut down your.

For example, let's say your total power consumption is 1,700 watts. This is the crucial number you'll need to use in order to properly size your inverter. We already discussed how this can be calculated in our battery sizing lesson. If you need a quick refresher, check out our [Sizing Battery](#).

A question to ask: How close should the inverter rating be to the panel wattage?

Ideally at 80–110%, to compensate for panel overproduction in bright sunlight and to avoid compromising inverter efficiency.

### 2. Select an Appropriate Inverter Rating

Here's how inverter sizes usually correlate: Panels:

If you have a 1000 watt solar array, your inverter must be at least 1200 watts. There must be at least 10% reserve power available, 20% is even better for large off grid solar systems

The right way to size an inverter is to check the wattage. The inverter wattage must be the same or greater than.

A solar inverter inverts battery or solar power into standard home electricity,

enabling devices to run on stored energy. This conversion is very necessary in households, RVs, solar systems, and emergency backup power solutions. They work on two power ratings- continuous power and surge power.
