

Inverter power is negative

Overview

An inverter converts the DC electricity from sources such as or to AC electricity. The electricity can be at any required voltage; in particular it can operate AC equipment designed for mains operation, or rectified to produce DC at any desired voltage. An (UPS) uses batteries and an inverter to suppl.

Inverter power is negative

Negative Power Values

This is a bidirectional power measurement application, such as a photovoltaic system, where negative power occurs whenever you generate more power than you consume.

What does the negative value for load mean in the System Status ...

If the load shows a negative symbol, then that means that the unit is in AC coupled mode. AC coupled is selling power to the grid from the AC output of the inverter.
