

One-to-six micro inverters

Overview

What is a microinverter solar inverter?

Microinverters are a type of solar inverter technology installed at each panel. Microinverters offer many benefits, such as rapid shutdown capabilities, flexibility for panel layouts, and panel-level monitoring and diagnostics. Microinverters are typically more expensive than traditional string inverters.

What are micro-inverters and how do they work?

Micro-inverters are small inverters rated to handle the output of a single solar panel. They are connected to individual panels and the electric power from several micro-inverters is combined and fed into an existing electrical grid. Unlike conventional string or central inverters, micro-inverters are connected to multiple solar panels.

What are the most popular microinverters available in Australia?

Below is our detailed comparison of the most popular microinverters available in the Australian, European, Asian and US markets. Enphase Energy and APsystems are the most well-known microinverter manufacturers, while ZJBeny, Hoymiles & ZJ Beny recently entered the increasingly competitive market.

How much does a microinverter cost?

Microinverters typically cost a couple of hundred dollars per unit. While they offer many advantages, which we will cover further, microinverters are notably costlier than string inverters when installed on an entire solar power system.
