With electricity bills consuming a significant portion of operational expenses, factory owners are now exploring rooftop solar for manufacturing units as a cost-effective and long-term solution. The shift is also driven by Environmental, Social, and Governance (ESG) goals and carbon neutrality.

Whether you are looking to cut costs, reduce your carbon footprint or secure your future energy supply, Geo Green Power offer expert commercial solar installations with proven high yielding solar panels. Why harness solar energy for your factory or industrial building roof?

The roofs of factories.

Installing solar panels and photovoltaic panels on a factory rooftop involves several structured steps and considerations to efficiently harness solar energy. The installation process encompasses planning, choosing the right equipment, and adhering to safety regulations, which ensure the long-term.

Not all factory roofs are equipped to handle traditional glass solar panels. Many buildings, such as warehouses, logistics centers, and older factories, face weight limitations (they can't bear the weight of glass panels, need massive structural adjustments, and are also difficult to install).

So, the big question is — can you install solar panels on a warehouse roof?

The answer is a resounding yes! Let's explore how this works, what you'll need, and why it's a smart move for your business. 3 What's the Cost of Installing Solar
