

# Western Europe Mobile Energy Storage Container 600kW Cooperation

## Overview

---

How many GW of energy storage will Europe have in 2050?

Different studies have analysed the likely future paths for the deployment of energy storage in Europe. They point to more than 200 GW and 600 GW of energy storage capacity by 2030 and 2050 respectively (from roughly 89 GW in 2024, mainly in the form of pumped hydro storage).

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

What is the European energy storage inventory?

A new interactive platform—the European Energy Storage Inventory —has been launched to provide near real-time insights into energy storage deployment across the EU, marking a major step toward a smarter and more sustainable energy system.

How much energy storage will be added to European grids by 2030?

Compared to 2024, an additional 128GW/300GWh of electrochemical storage is expected to be added to European grids by 2030. Looking forward, the Global Energy Storage and Grids Pledge, adopted at COP29 in 2024, reinforced the commitment of the G7 pledge on storage.

## Western Europe Mobile Energy Storage Container 600kW Cooperation
